

1.6 Ethical, legal, cultural and environmental impacts of digital technology

Why this unit is taught the way it is

What this unit teaches, and where it ends

9 lessons: 7 with an online experience, 1 paper assessment and 1 bonus challenge. 92 activities in all, worth 197 marks.

By the end of it a pupil should be able to:

- know the range of issues to consider when a new technology is introduced e1-101
- understand at least one ethical issue of computer technology e1-101
- be able to argue both sides and reach a conclusion e1-101
- understand at least one issue related to privacy and computer technology e1-102
- be able to weigh the benefits and risks of collecting personal data e1-102
- know the principles of the Data Protection Act 2018 e1-103
- know the principles of the Computer Misuse Act 1990 e1-103
- know the principles of the Copyright, Designs and Patents Act 1988 e1-103
- understand the impact of technology on daily life e1-104
- understand the digital divide e1-104
- understand globalisation e1-104
- understand the environmental impact of manufacturing computers e1-105
- understand the environmental impact of using computers e1-105
- understand the environmental impact of disposing of computers e1-105
- be able to identify key stakeholders e1-106
- be able to consider a scenario from the perspective of stakeholders e1-106
- understand impacts at local, national and global levels e1-106
- understand the difference between open source and proprietary software e1-107
- understand the implications of using open source and proprietary software e1-107

Why the lessons are in this order

Each lesson's starter retrieves the one before it, so the order is the retrieval schedule as much as the teaching one. The chain for this unit:

LESSON	TEACHES	RETRIEVES
1 Impact desk	know the range of issues to consider when a new technology is introduced	nothing before it in this unit
2 Privacy lab	understand at least one issue related to privacy and computer technology	Impact desk
3 Law court	know the principles of the Data Protection Act 2018	Privacy lab
4 Culture street	understand the impact of technology on daily life	Law court
5 Planet works	understand the environmental impact of manufacturing computers	Culture street
6 Stakeholder room	be able to identify key stakeholders	Planet works

LESSON	TEACHES	RETRIEVES
7 Licence lab	understand the difference between open source and proprietary software	Stakeholder room
8 End of topic test	assesses the whole unit	Licence lab
9 Name that Act	stretches what is taught	End of topic test

The assessment in this unit is placed where it is so that the reflection sheet still has lessons left to send a pupil back to.

What pupils find hard here

This unit's wall panels are painted into the 360 images and are not held as text, so a "common mistake" line written on a wall cannot be gathered here. Open each experience, or read the lesson plans, which carry the station names and the distractors of every question.

Every multiple-choice and Predict activity in the unit — 64 of them — offers wrong answers that are the misconception, not filler. The split across those options at the hinge question is the cheapest diagnostic in the lesson.

Where the explaining, modelling and practising happen

PHASE	WHERE IT IS
Retrieve	The starter on the worksheet, before any device is opened. It is answered on paper and corrected before the lesson moves on.
Explain	The slides and the station walls carry the same explanation, so a teacher can teach from the front and a pupil can re-read it in the room.
Model	There is no worked example on screen in this unit: its activities are questions to answer rather than techniques to copy. The modelling is yours, from the slides, before anyone starts - and it is the part to protect when the lesson runs short.
Practise	84 guided activities, then 8 independent ones.
Check	The badge questions mark as the pupil goes; the hinge question is for the class at once.
Apply	0 challenge activities, and the exam practice on the worksheet.
Review	The exit question and the confidence columns. The confidence columns supplement the evidence; they do not stand in for it.

How the website, the slides and the worksheet divide the work

They are not three copies of the same thing.

- **The slides** are for the front of the room: the explanation and the model, before anyone is working alone.
- **The experience** is where a pupil reads, decides and is marked. It gives the immediate feedback a teacher cannot give thirty pupils at once.
- **The worksheet** is the record and the writing. The key fact in their own words, the station challenge, the exam practice. It is also what survives when the devices do not.

The rule that holds them together is **write first, then answer at the badge**. A pupil who taps first has turned the lesson into a quiz game, and the worksheet is how you can see at a glance who did.

Why a 360° room, and what it should produce

The room is not there to be impressive. It is there because this unit's content is a set of related parts that a pupil has to hold together, and putting one part on each wall makes the set visible and navigable: a pupil can turn back to station 2 while answering station 4. The evidence it should produce is on paper — 0 key facts and 0 station challenges in a pupil's own words — and in the score screen, which shows which station a pupil lost marks on rather than one number.

No claim is made here that immersion improves learning on its own. What the format does is make the structure of a topic physical and keep a pupil's attention on one part at a time; the teaching is in the explanation, the example and the practice, as it would be anywhere else.

Support, and how it is taken away

- The worked example is on the early activities of a station and not on the late ones. That fade is deliberate.
- The hint is a ladder asked for one rung at a time, and the top of it is still the technique on different data, never the answer.
- Read aloud is on every task.
- Prescribed values are boxed and in a monospace face as well as coloured, so they survive a black-and-white printout and a high-contrast mode.
- **Lower literacy and EAL:** pre-teach the vocabulary (Ethical issue, Stakeholder, Personal data, Consent, Data Protection Act 2018, Computer Misuse Act 1990, Digital divide, Globalisation, E-waste, Carbon footprint, Trade-off, Open source). Accept the key fact spoken before it is written, and in two or three words.
- **SEND:** pace is not fixed. Progress saves after every answer and reopens at the earliest unfinished question, so a pupil may finish a station next lesson without losing anything.
- A headset is never required.

Checking, and what to do with what you find

Three checks, in this order: the starter (did last lesson stick), the hinge question (is the class ready for independent work), the exit question (did this lesson stick). The first two change what you do in the lesson; the third changes what you start the next one with.

When a hinge question splits the class, go back to the station it sits on and work its example again, aloud, before anyone goes on. When a test comes back, the reflection sheet names the topics to revisit and review mode on those lessons reopens exactly the questions a pupil got wrong.

Where the approach comes from

The shape of a lesson here — retrieve, explain, model, practise with support that fades, check, apply, review — is ordinary evidence-informed practice rather than anything this product invented. Useful starting points, none of them about Revise 360:

- Rosenshine, *Principles of Instruction* (American Educator, 2012) — the daily review, small steps, worked examples and checking for understanding that this structure follows.
- Sweller, van Merriënboer and Paas on cognitive load and the worked-example effect — why the example comes before the independent task and why the support is withdrawn gradually.
- Dunlosky et al., *Improving Students' Learning With Effective Learning Techniques* (2013) — the evidence for retrieval practice and spacing, which the starters and the review mode use.
- Wiliam, *Embedded Formative Assessment* — hinge questions and what to do with the answers.

What is not claimed. Nothing above is evidence that Revise 360 improves outcomes. No trial of this product has been run, and immersion is not claimed to improve learning by itself. The citations are for the teaching structure; whether these resources work in your classroom is a question your own assessment answers.
